

K.I.D.S Multispeciality Hospital Launches Centre for Advanced Orthopedic Treatment

To set best practice standards in its services and to continuously improve performance and exceeding the expectations of patients and their families, Kanungo Institute of Diabetes Specialties Hospital has launched its orthopedic Dept with modern diagnosis and surgical and non surgical treatment facilities.

The Department offers

- Treatment of complex fractures using both internal fixation and external fixation techniques.
- Specialized surgery of bone cancer in collaboration with oncologists (cancer specialists).
- Hand surgery and upper limb surgery where in tender repairs, micro vascular surgery, surgery for brachial plexus injuries, bone injuries, reattachment of amputated parts is done.
- Spine surgery and treatment of spine tumors, spine infections, and correction of spine deformities is available, including treatment of spine fractures.
- Treatment for children's orthopedic problems such as club foot, knock knees, bowing of knees, curvature of spine.
- Arthroscopy surgery and reconstruction ligament injuries of the knees.
- Treatment of arthritis- both rheumatoid arthritis gout, seronegative arthropathies like ankylosing spondylitis. This is done in collaboration with the rheumatology team. Osteoporosis is managed aggressively by this team.
- Pre and Post Surgical Physiotherapy for faster recovery and relief of pain
